and development***

***Areas Of
development
in science and
technology***

***Higher
education***

***Information and
Communication
Technology***

***Advancement of
Agricultural
system.***

Technology and society

Cctv cameras at every place especially at public place Is one of the best example of keeping the crime under surveillance and keeping the society under security.

Because of advancement in technology today,As people can know well being of their dear relatives through a phone call.

Today most of the villages in India have electricity, road and can avail for their essential facilities.

Telecommunication network Towers Have been set up at the remotest to remote areas of India.

India and Science & Technology

Ever since British rule, India has always been in talks All over the world. After independence it is science and technology which have India adopt advance future.

Subsequently , Science and Technology has Assisted in advancing in various fields including Mathematics , Space Technology , nuclear energy , Etc.

Looking at the most recent achievement (chandrayan-2)

This lunar explorer of india Was made possible due To science and technology.

Chandrayaan - 2

CONCLUSION

In conclusion , we must admit that Science and Technology have lead Global Civilization to achieve perfection in living . However , we must utilise everything in wise perspectives and to limited extends. Misuse of science and technology can produce consequences. Therefore we must monitor the use and be wise in our actions.

Thank
You
